Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 refers to "the weir portion protruding from a bottom of said groove", a similar reference to "said grooves" is made in claim 2. Claim 1 recites two distinct grooves, front side and rear side. Thus, it is not clear which of these grooves "said groove" refers to.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Emrich et al.

See in particular the Fig. 5 embodiment, showing ramps 60, 66, 67, and 68 that alternately ascend and descend and cooperate with apertures 71, 72 to create turbulence in the fluid flowing along the fin and to direct the fluid to pass through the apertures from one side of the fin to the other (see paragraphs 38-41). These ramps read on the claimed "weir portions". As can be seen in the drawings, they are formed such that they effectively deflect flow on both sides of the sheet of the corrugated fin (in regard to claim 2).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The remaining references show various inner fins with turbulence-generating means.
